

Standard laptop procurement

Customer Journey Map

PROJECT NAME	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
TEAM ID	MKU201Team76ab4df35a238dc999eb5e6de
DATE	30 September 2026

SCENARIO		Entice		Enter		Engage				Exit			Extend			
Ordering, approving and configuring a standard laptop through ServiceNow		How does someone initially become aware of this process?		What do people experience as they begin the process?		In the core moments in the process, what happens?				What do people typically experience as the process finishes?			What happens after the experience is over?			
Steps	What does the person (or group) typically experience?	Need a laptop	Open ServiceNow	Open Service Catalog	Select Standard Laptop	Click Order Now	Check order status	Approve request	Flow creates task	Task goes to Hardware	Verify catalog task	Configure laptop	Hand over laptop	Track the record	Review efficiency	Extend automation
		A new joiner or employee needs a standard laptop to start working	The user signs in to the ServiceNow instance	From the All menu, the user opens Service Catalog	The user goes to Hardware and selects Standard Laptop	The user clicks Order Now to place the laptop request	The user checks the Order Status and opens the Request Number	The approver opens the Approvers section and clicks Approve	The Standard Laptop Task flow runs and creates a Catalog Task	The task is assigned to the Hardware group: "Laptop need to be Configured"	Open the Requested Item, go to Catalog Tasks and check the task	The Hardware team configures the laptop when it arrives	The task is completed and the ready laptop reaches the user	Request, item and task stay on record in ServiceNow	The team reviews reduced manual effort and delays	The same flow pattern is reused for other catalog items
Interactions	What interactions do they have at each step along the way?	Conversation or email with the IT procurement team	ServiceNow web portal in the browser	ServiceNow All menu > Service Catalog	Service Catalog > Hardware category	Standard Laptop catalog item page	Order Status page and Request record	Request record > Approvers section	Flow Designer flow running as System User	Catalog Task record in the Hardware group queue	Requested Item record > Catalog Tasks	Hardware team and the physical laptop	Catalog Task closure and handover	Request and task records	ServiceNow lists and reports	Flow Designer
Goals & motivations	At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")	Help me get a working laptop without delay	Help me reach the right place to request hardware	Help me find where to place my order	Help me pick the right item	Help me submit the request with minimal effort	Help me know my request was received	Help me approve quickly so the order is not held up	Help me avoid manual work to raise the configuration task	Help me get the right team working on it straight away	Help me confirm the task was created correctly	Help me get the laptop ready as soon as it arrives	Help me start working on my new laptop	Help me see what was ordered and done	Help me see if the automation is helping	Help me apply this to other hardware requests
Positive moments	What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?		One place for all IT requests	Items are grouped into clear categories	Standard option means no complicated choices	Ordering takes a single click	Request number is generated immediately	Approval is done in one action	Task is created automatically, nothing is overlooked	Correct team is assigned instantly	Short description and group are visible at a glance	Configuration starts promptly, so less waiting	User receives a ready-to-use laptop	Full trail from request to task	Less manual intervention in procurement	Reusable pattern for other standard items
Negative moments	What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	Requests without a clear process cause confusion about who to ask			Similar item names could lead to picking the wrong one		Users may be unsure what happens next	Approval can wait if the approver is not reminded	Before automation, the configuration step could be overlooked or delayed			Configuration itself is still manual work				
Areas of opportunity	How might we make each step better? What ideas do we have? What have others suggested?	Make the standard laptop request easy to find from the start		Add a shortcut for frequently ordered items	Show a short description of the item on its card	Show a clear confirmation once the order is placed	Show the expected next steps on the status page	Send reminder notifications to approvers	Add monitoring and alerts for flow runs	Notify Hardware group members when a task arrives		Add a configuration checklist to the task	Notify the requester when configuration is complete	Build a dashboard of laptop requests	Report on turnaround time per request	Create flows for other standard hardware items
