

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

|               |                                                                                   |
|---------------|-----------------------------------------------------------------------------------|
| Date          | 30 September 2026                                                                 |
| Team ID       | MKU201Team76ab4df35a238dc999eb5e6de                                               |
| Project Name  | Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer |
| Maximum Marks | 4 Marks                                                                           |

**Functional Requirements:**

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)                                                                                                                                                                               |
|--------|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FR-1   | Flow Creation                 | Create the "Standard Laptop Task" flow in Flow Designer (Global application, Run As System User)<br><br>Configure Service Catalog as the flow trigger                                                            |
| FR-2   | Catalog Task Automation       | Add the Create Catalog Task action mapped to the Requested Item record<br><br>Set Short Description and Description as "Laptop need to be Configured"<br><br>Assign the task automatically to the Hardware group |
| FR-3   | Flow Assignment               | Open the Standard Laptop item in Maintain Items<br><br>Remove existing Process Engine automation<br><br>Select Flow and attach the "Standard Laptop Task" flow                                                   |
| FR-4   | Service Catalog Ordering      | Order Standard Laptop from Service Catalog > Hardware using Order Now<br><br>Generate the Request Number and display the Order Status                                                                            |
| FR-5   | Request Approval              | Open the Approvers section of the request record<br><br>Approve the request using the Approve option                                                                                                             |
| FR-6   | Task Verification             | Open the Requested Item record and its Catalog Tasks section<br><br>Verify the task shows the correct Short Description and Assignment Group                                                                     |

## Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description                                                                                                                                       |
|--------|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| NFR-1  | <b>Usability</b>           | Simple catalog ordering through Order Now, with a clear Order Status and Request Number; no manual effort needed to raise the configuration task. |
| NFR-2  | <b>Security</b>            | Flow runs as System User; the configuration task is restricted to the Hardware group and requests require approval by authorised approvers.       |
| NFR-3  | <b>Reliability</b>         | Every approved Standard Laptop request consistently generates a Catalog Task, so configuration is never overlooked or delayed.                    |
| NFR-4  | <b>Performance</b>         | Catalog Tasks are created automatically as soon as the request is approved, reducing user wait time and manual intervention.                      |
| NFR-5  | <b>Availability</b>        | The flow runs on the ServiceNow cloud platform and stays active once activated, so laptop requests can be raised and processed at any time.       |
| NFR-6  | <b>Scalability</b>         | The flow handles growing volumes of laptop requests and can be reused or extended to other catalog items and assignment groups.                   |
